

ABSTRACT

To provide a skin treatment composition for wrinkle reduction that is superior in terms of the
5 wrinkle reduction effect, usability, and the sensation during use.

A skin treatment composition having a water dispersion of a polymer in which a non-water soluble film-forming polymer is dispersed in water
10 wherein the main ingredients of said film-forming polymer are polyurethane having a film shrinkage rate of 20% or less and an acrylic type polymer having a film shrinkage rate of 20% or less.

Also, a skin treatment composition for
15 wrinkle reduction comprising (a) a non-emulsification type cross-linked silicone, (b) a film forming polymer having a film shrinkage rate of 20% or less containing as a main ingredient a polyurethane having a film shrinkage rate of 20%,
20 (c) a liquid oil component, and (d) water.
